ВОДЯНЫЕ И МАСЛЯНЫЕ БАНИ

PRECISION AND SAFETY BROUGHT TO THE POINT.

WATERBATH W

OILBATH O

100% ATMOSAFE. MADE IN GERMANY.

Uniquely precise and reliable.

Of course always at the right temperature

Since in 1947 the first Memmert hot air steriliser has left our facilities, we have pursued one essential goal in the development of our thermostatic ovens and thermostatic baths: controlled atmosphere. Inseparably linked to this are reliability, optimum temperature homogeneity and stability, user friendliness and an outstanding price/performance ratio. This promise to customers and users is called: 100% AtmoSAFE.

It is the modern control technology which makes Memmert's waterbaths and oilbaths unparalleled in precision. At least 2-fold over-temperature protection guarantees optimum safety for all baths. You can combine programme start delay and hold time, for baths of the Excellent class even setpoint-dependent. Made by professionals for professionals.

WATERBATHS BASIC WNB

7 / 10 / 14 / 22 / 29 / 45 litres

WNB 7 - 45: +10 °C up to +95 °C and boiling stage

2-stage safety through relay switch-off close to the setpoint (approx. +10 °C) and mechanical temperature limiter TB at +135 °C

optional with Peltier cooling unit

WATERBATHS EXCELLENT WNE

7 / 10 / 14 / 22 / 29 / 45 litres

WNE 7 - 45: +10 °C up to +95 °C and boiling stage

relay switch-off close to the setpoint (approx. +10 °C) and mechanical temperature limiter TB at +135 °C

additional electronic temperature controller TWW as standard or alternatively temperature limiter TWB adjustable in the setup

optional with Peltier cooling unit

WATERBATH EXCELLENT WITH CIRCULATING PUMP WPE

45 litres

WPE 45: +10 °C up to +95 °C and boiling stage (only with pump switched off)

relay switch-off close to the setpoint (approx. +10 °C) and mechanical temperature limiter TB at +135 °C

additional electronic temperature controller TWW as standard or alternatively temperature limiter TWB adjustable in the setup

optional with Peltier cooling unit

OILBATHS EXCELLENT ONE

7 / 10 / 14 / 22 / 29 / 45 litres

ONE 7 - 45: +20 °C up to +200 °C

relay switch-off close to the setpoint (approx. +10 °C) and mechanical temperature limiter TB at +230 °C

additional electronic temperature limiter TWB adjustable as standard

PRECISE / USER FRIENDLY / RELIABLE

WATERBATHS BASIC WNB
WATERBATHS EXCELLENT WNE, WPE
OILBATHS ONE

Memmert waterbaths and oilbaths – that is the combination of high-grade anti-corrosion stainless steel with the latest electronics, for maximum functional security and decisive advantages in convenience and ease of operation. With a setpoint resolution of 0.1 K, indicated temperature to the nearest 0.1 K, and timer programming of switch-on delay and hold time in 1-minute steps, the accuracy of Memmert thermostatic baths is carried to a new dimension.

E – an excellent decision!

In the Excellent version the Memmert waterbaths and oilbaths perfectly conform to professional requirements of quality management and to technical regulations and standards:

- Excellent overtemperature protection and digital level monitor to guarantee secure long-term tests – with visual and audible alarm signals
- Excellent quality assurance on standardised or documented material tests through ± 5 K recalibration facility on the controller
- Excellent user friendliness through programmable start of hold time only after reaching the temperature setpoint

Dual-use heating design

The tank does not contain any heating elements liable to corrode or attract lime deposits. Fully protected against moisture and yet close to the tank contents, the heating is located underneath deep-drawn and easy-to-clean ribs. This form of construction generates natural turbulence and therefore better temperature distribution in the bath (see sketch). Heating from three sides ensures optimal temperature uniformity. At 95 °C water temperature the deviation over the entire bath is less than 0.36 °C!

optimal temperature uniformity

Water level control

Where an almost constant water level is required, each thermostatic bath can optionally be fitted with a level control device. The bath is connected by hoses to the mains water system and is continuously supplied drop-wise with additional water. An overflow permits maintaining two different water levels.

Two baths in one

The optional electronically controlled shaking device is available in two versions for different bath sizes (requires special gable cover). It converts the models from size W14 upwards into an adjustable-speed shaking bath with horizontal movement from 35 to 160 strokes per minute.

An electronic blockage protection switches off the motor within fractions of a second on a sudden overload.

MODERN CONTROL TECHNOLOGY Because there are such great variations in thermal tests and tested materials, Memmert offers waterbaths in two performance classes. For warming paraffin wax, for example, the Basic waterbath is usually adequate. The Excellent version on the other hand supports reliable and precise testing processes; e.g. safety glass for the motor and aircraft industries is tested in the waterbath for its moisture absorption, the oilbath with its higher temperatures up to +200 °C is ideal for testing and calibrating temperature sensors, among others.

The functions of the Basic version WNB

- ① **Normal operation**
Press the SET key, select the setpoint temperature
- ② **Delayed switch-on**
Go home in the evening; in the morning the bath is already at temperature.
From 0 to 99:59 hrs (Excellent: 999 hrs) setting accuracy: 1 minute
- ③ **Programmable hold time**
Select to the nearest minute how long the waterbath should hold the temperature.
From 0 to 99:59 hrs (Excellent: 999 hrs) setting accuracy: 1 minute
- ④ **Visual alarm**
If the setpoint temperature is exceeded by more than 10 °C the monitor relay permits emergency operation, indicated visually by the flashing alarm signal. If the factory-set maximum temperature is exceeded the mechanical temperature limiter TB switches off the heating permanently and the alarm symbol is on continuously.

The functions of the Excellent version WNE – WPE – ONE

Excellent versions offer everything included in the Basic versions and in addition still more convenience and security: start of hold period only after reaching the setpoint, re-calibration on the controller.

- ① **Electronic overtemperature protection**
Set the monitoring temperature with 0.1 °C accuracy up to 10 °C above nominal temperature. If there should be a fault, you can choose in setup through standard function selection between continuation of the procedure (TWW) or abort (TWB).
- ② **Level**
This flashes on low liquid level. At the same time there is an audible alarm and the heating is switched off automatically.
- ③ **Audible signals**
There is a brief beep at programme end and also as input acknowledgement.
On overtemperature and low liquid level there is an audible signal together with a visual alarm.
- ④ **Circulating pump** (WPE 45 only)
The circulating pump in the WPE 45 optimises the thermal uniformity of the large water volume!

Push and turn – intuitive operation of the control

Memmert carries out the entire development, production and assembly of all baths in-house. This allows electronic development and product design to be matched exactly to customer requirements.

In the Basic versions an electronic PID controller ensures that the selected temperature is accurately reached and maintained. The multi-functional fuzzy-supported PID control on the Excellent versions guarantees maximum security. Two high-grade platinum sensors are responsible for temperature control and for monitoring temperature and level. Like a climbing team on a rope they communicate with each other and ensure uninterrupted fault-free temperature control; the high-grade 4-wire circuit guarantees uncorrupted transmission of measurements.

The result can readily be seen behind the easy-clean glass window: all essential settings and operating states are clearly displayed.

WATERBATH COOLING / PELTIER TECHNOLOGY

PELTIER COOLING UNIT CDP 115 Worldwide only from Memmert! The innovative Peltier cooling unit CDP 115 enables you to work exactly at temperatures below room temperature and puts an end to unwieldy external cooling units. Space-saving, environmentally friendly and precise in its temperature control, it fits on the smallest as well as on the largest Memmert waterbath! Your benefits: Compact design, user-friendly snap-on technology and exact controllability down to ± 0.1 K.

Cooling with Peltier – sustainable and energy-saving

If constant set temperatures close to ambient are required in the waterbath, Peltier elements cool down the tempering medium in a way that is economical, eco-friendly and precise.

- No gases or fluids (coolants) required
- Quiet and smooth-running
- High control precision
- Saves valuable space in the laboratory

A cooling unit for all Memmert waterbaths!

The CDP 115 extends the temperature range of the Memmert waterbaths from +10 °C to +95 °C. It can be fitted to all appliances from 7 to 45 litres in capacity, quickly and without technical knowledge. Simply hang it onto the flaps of the gable cover hinge, and that's it! The water is continually circulated via two Norpren tubes, cooling it down. Simultaneous use of the SV shaking device is not a problem.

Fluid circulation

Safety and precision are involved, as always!

The cooling unit CDP 115 has its own main switch. The temperature is controlled via the electronic controller of the waterbath and achieves an impressive precision of ± 0.1 K. A frost protection unit we have developed switches off the cooling element if there is too little fluid flow, thus protecting the Peltier flow-through cooler from freezing. After the disruption has been cleared up, the frost protection switch resets automatically.

Average cooling speed

Filling volumes / bath size	Average cooling down speed*
7 litres / WN...7	14.1 K/h
10 litres / WN...10	9.9 K/h
14 litres / WN...14	7.1 K/h
22 litres / WN...22	4.5 K/h
29 litres / WN...29	3.4 K/h
45 litres / WN...45	2.2 K/h

* At a room temperature of +20 °C

WATERBATHS WNB, WNE, WPE / OILBATHS ONE

according to DIN 12 876-3, EN 61010, EN 61010-1 (IEC 61010-1), 61010-2-010 Standard appliances are safety-approved and bear the test marks:

Standard equipment

- Container: deep-drawn, laser-welded stainless steel interior with integrated large-area heating system on three sides (no disturbing fittings)
- Housing: textured stainless steel
- Connection: mains cable with plug
- Installation: 4 feet
